**Full-time contract role**

**Wonderful team environment**

**Contemporary studio in  
a heritage setting**

---

## **Project Architect – Defence focus**

---

We currently have a large multi-location defence project that requires a project architect. This role will ideally suit an architect with 6+ years of experience and involves the documentation of numerous refurbishment-related activities across multiple sites, including multiple building typologies. The role is a stepping stone to other defence and related opportunities.

Joining a small and well-established defence team and working with the defence director, you will also be part of the wider Healthy Communities group. Ongoing career development, a commitment to working in defence and a supportive environment will ensure this role provides you with a significant opportunity.

Located in the heart of Melbourne, our practice is a leader in integrated and sustainable design. We believe that good design can play a key role in reconnecting people with nature and the built environment.

To be successful for this position you will need:

- 6+ years of industry experience with a particular focus on defence or similar fields
- Self-motivated, strong communication skills and strong work ethic
- Good working knowledge of BCA regulations and Australian Standards
- Strong skills using Revit
- Demonstrate a working knowledge of Aconex
- High level of understanding of documentation
- Must be capable of producing accurate, timely documentation packages

**Applications close Wednesday 7 November 2018.**
